Falling Ice (Snow) Radiation Effects over ITCZ, SPCZ and Warm Pool

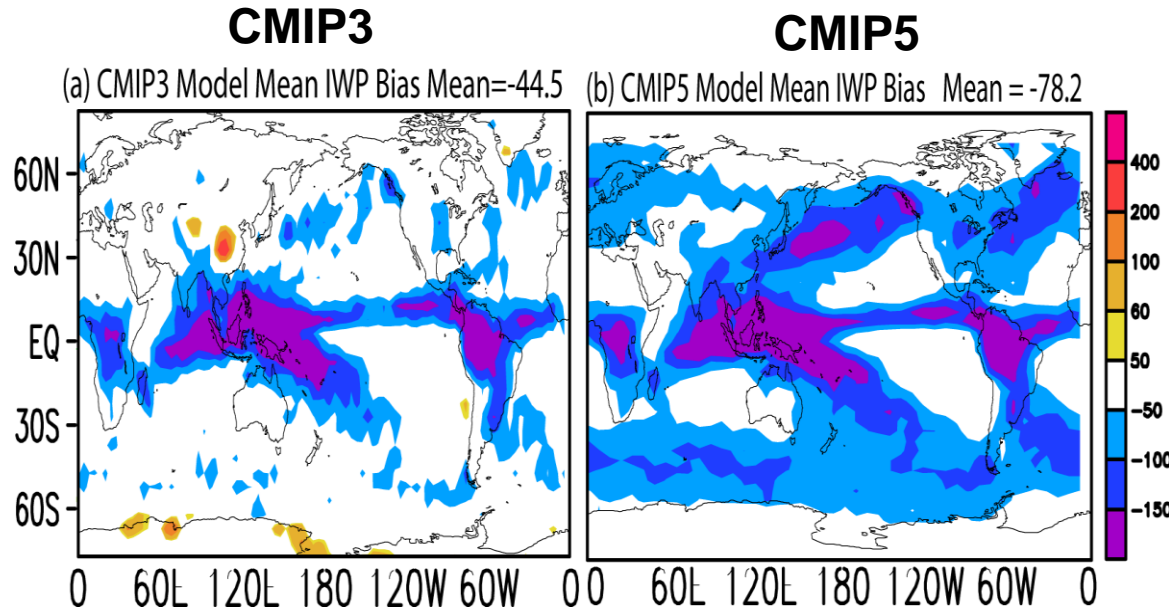

CloudSat + CALIPSO
Measurements are sensitive to:

Floating ice

Falling ice

- All CMIP3 and most CMIP5 GCMs **do not consider falling ice radiative effects.**
- Few GCMs in CMIP5 such as NASA-GISS model, NCAR-CAM5, GFDL-AM3 and CSIRO etc include **falling ice radiative effects**

Bias of CMIP3, CMIP5 and CMIP6 (four) Ensemble Mean CIWP vs Obs. Total CloudSat+CALIPSO ice water path (IWP)

Underestimated Total cloud IWP

Precipitating Ice Radiative Effects in Cumulus Scheme in GCMs

NCAR CESM1-CAM5 Snow-Radiation Effects Sensitivity Tests

Snow-Radiation effects ON (S)

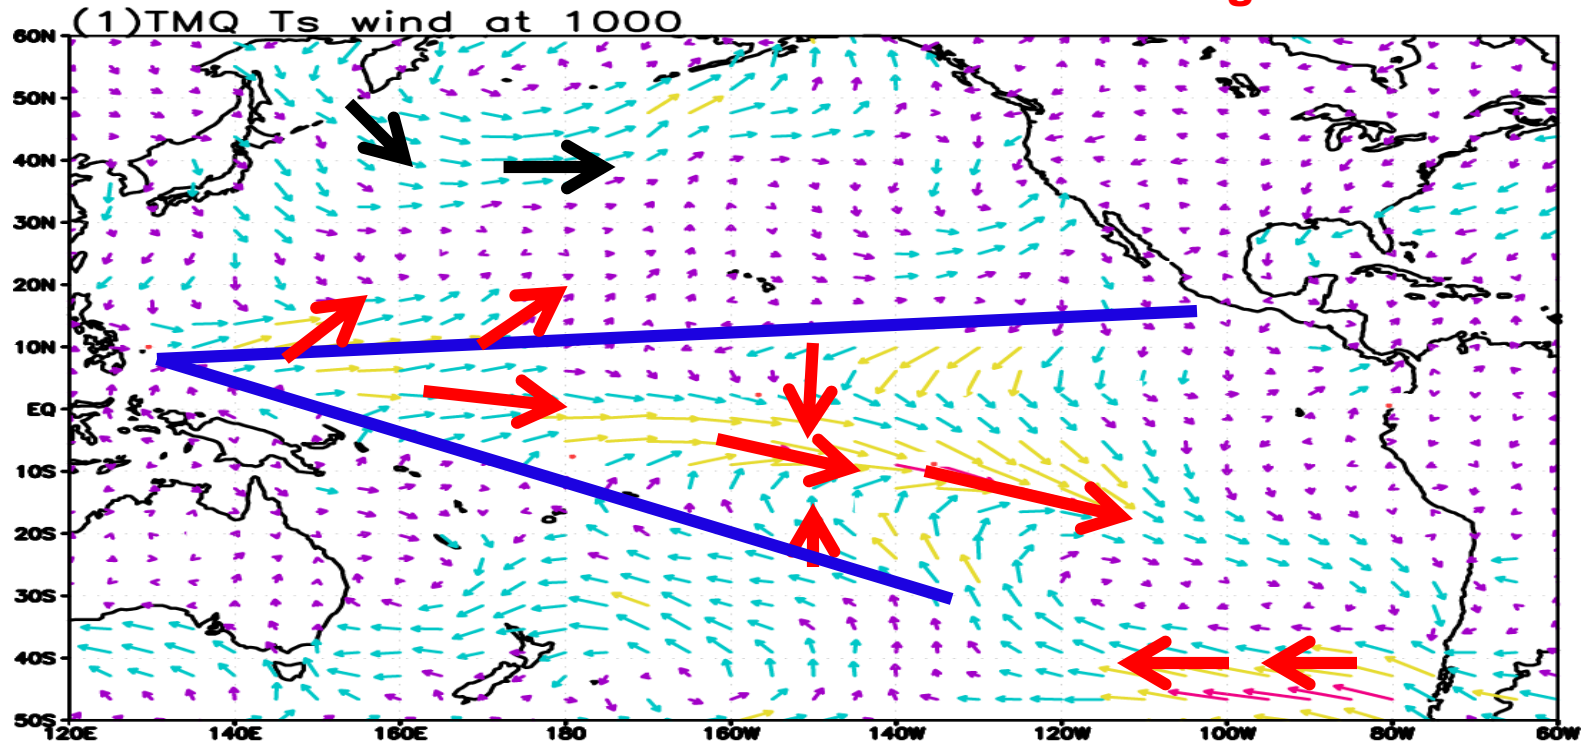

- **NCAR CESM1-CAM5: Exclusion of radiative diagnostic snow**
 - CESM1-CAM5-POP2: CMIP5 Historical Configuration (140 Years)
 - NoS = snow-radiation interaction OFF
 - S = snow-radiation ON

The IMPACTS of Exclusion of Snow-Radiative Effects

Model Ocean Surface Wind Vector Changes

Weaker surface wind stress and trade-winds

(a) Surface Wind Stress $500^*(\text{NoS} - \text{S})$ ANN

(b) SST Changes NoS - S ANN

(c) Surface Wind Stress $500^*(\text{NoS} - \text{S})$ DJF

(d) SST Changes NoS - S DJF

(e) Surface Wind Stress $500^*(\text{NoS} - \text{S})$ JJA

(f) SST Changes NoS - S JJA

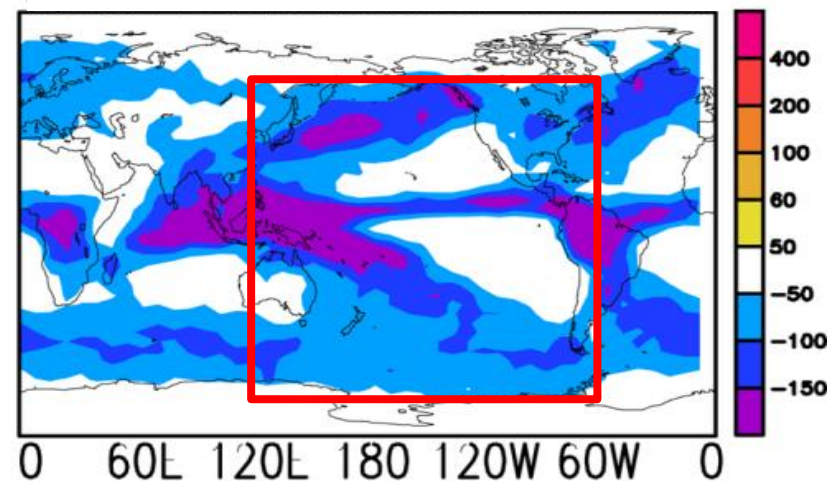

Bias of CMIP5 Ensemble Mean Radiation

(a) Reflected Shortwave at TOA

(b) CMIP5 IWP minus Obs.

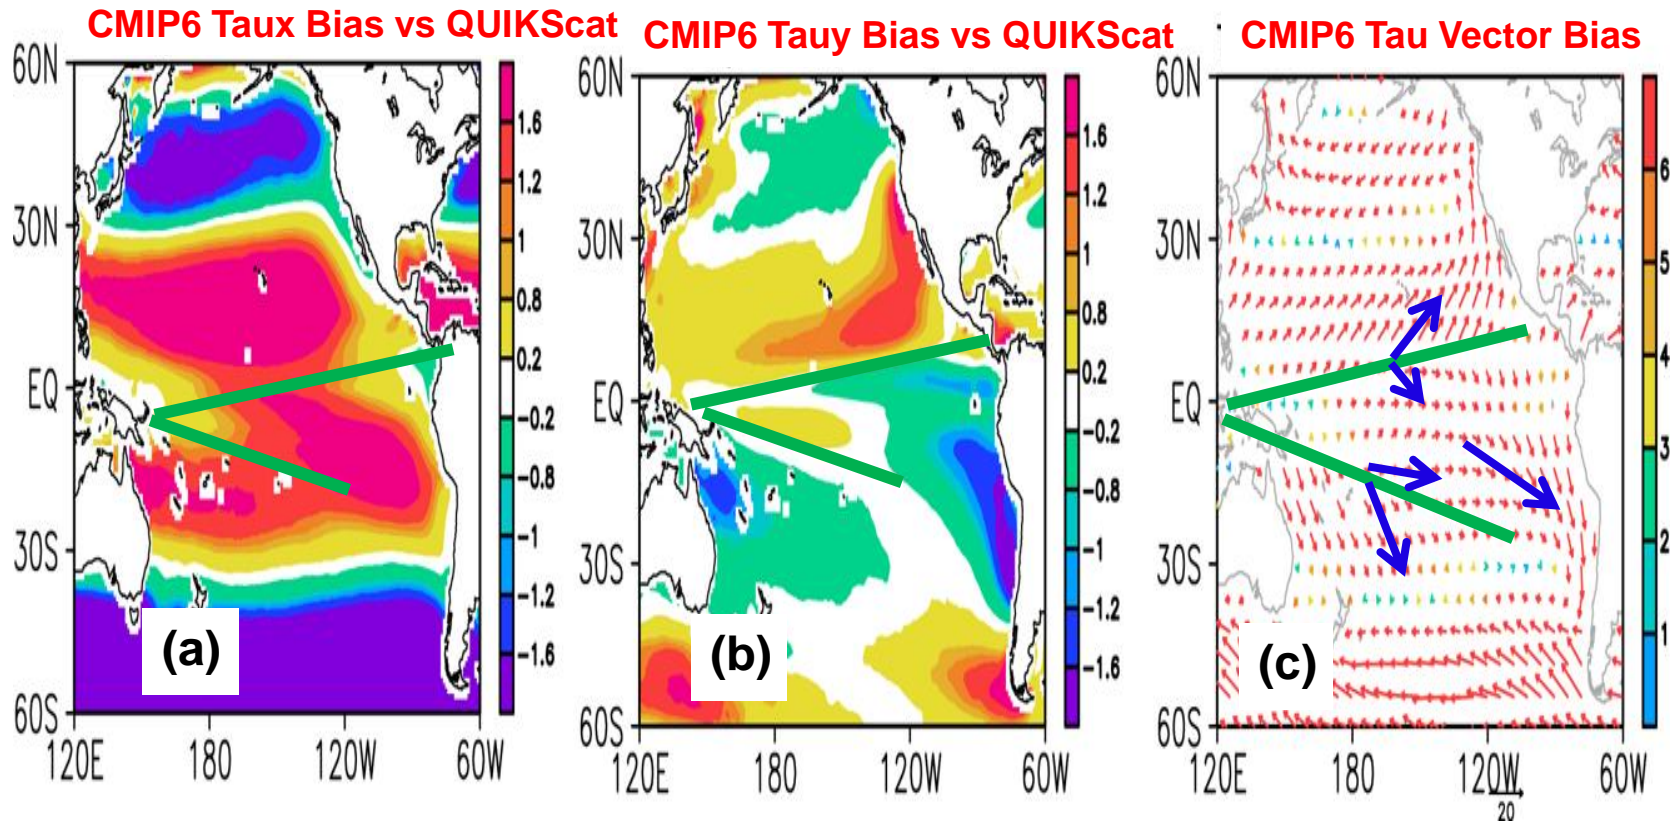

(c) Downward Shortwave at SFC

(d) Outgoing Longwave at TOA

CMIP6 Surface Wind Stress BIAS

The CMIP6 bias of annual mean maps of: (a) east-west surface wind stress magnitudes against QUIKSCAT; (b) same as in (a) but for north-south surface wind magnitudes (Wind; $m s^{-1}$); (c) same as in (a) but for the surface wind stress vectors from the 20th century (1970–2005) simulations from the CMIP6 historical run.

CESM1 Seasonal SST Bias

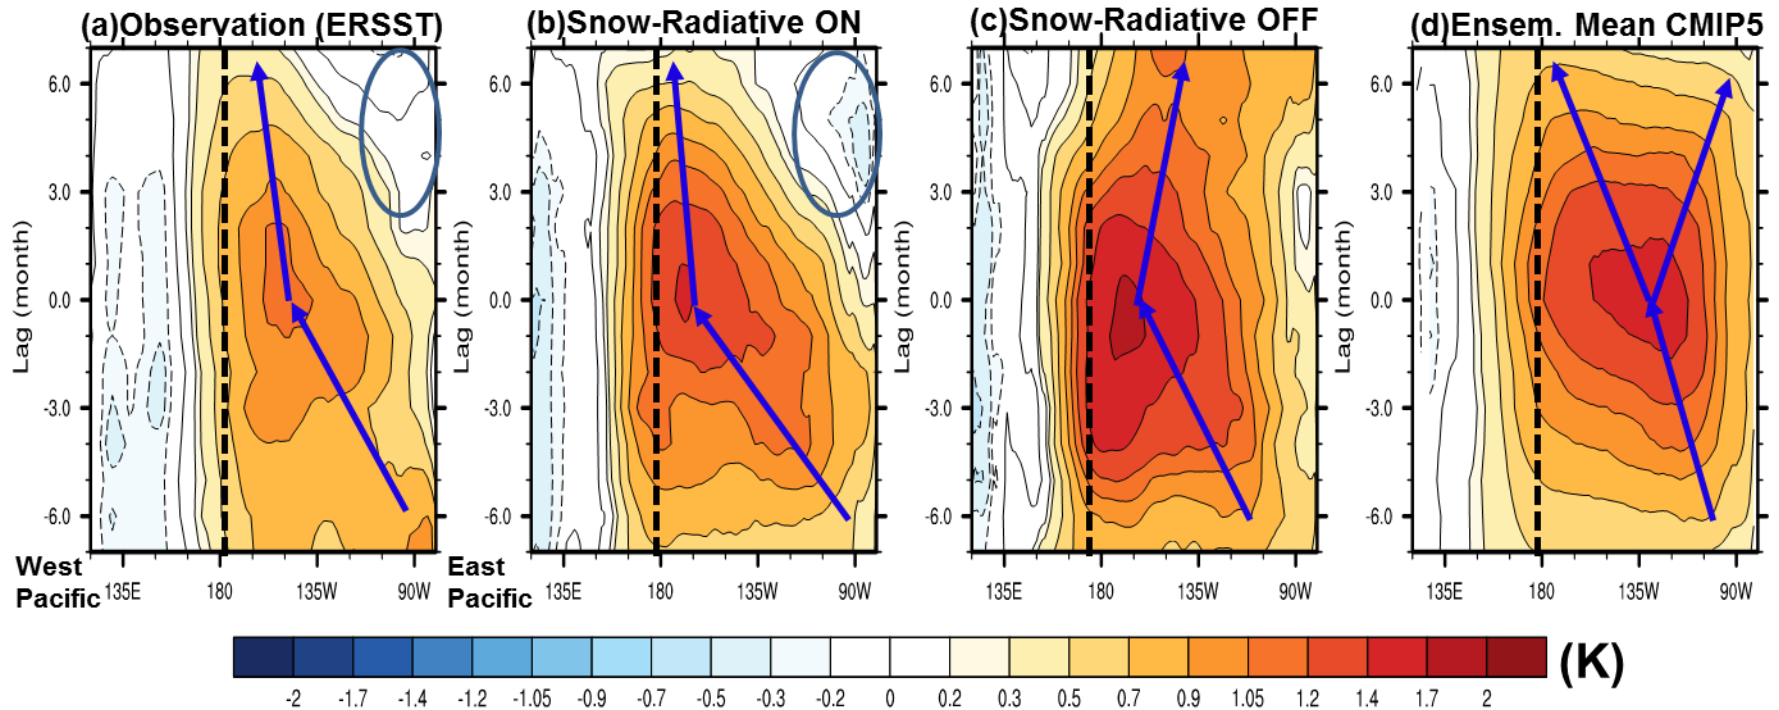

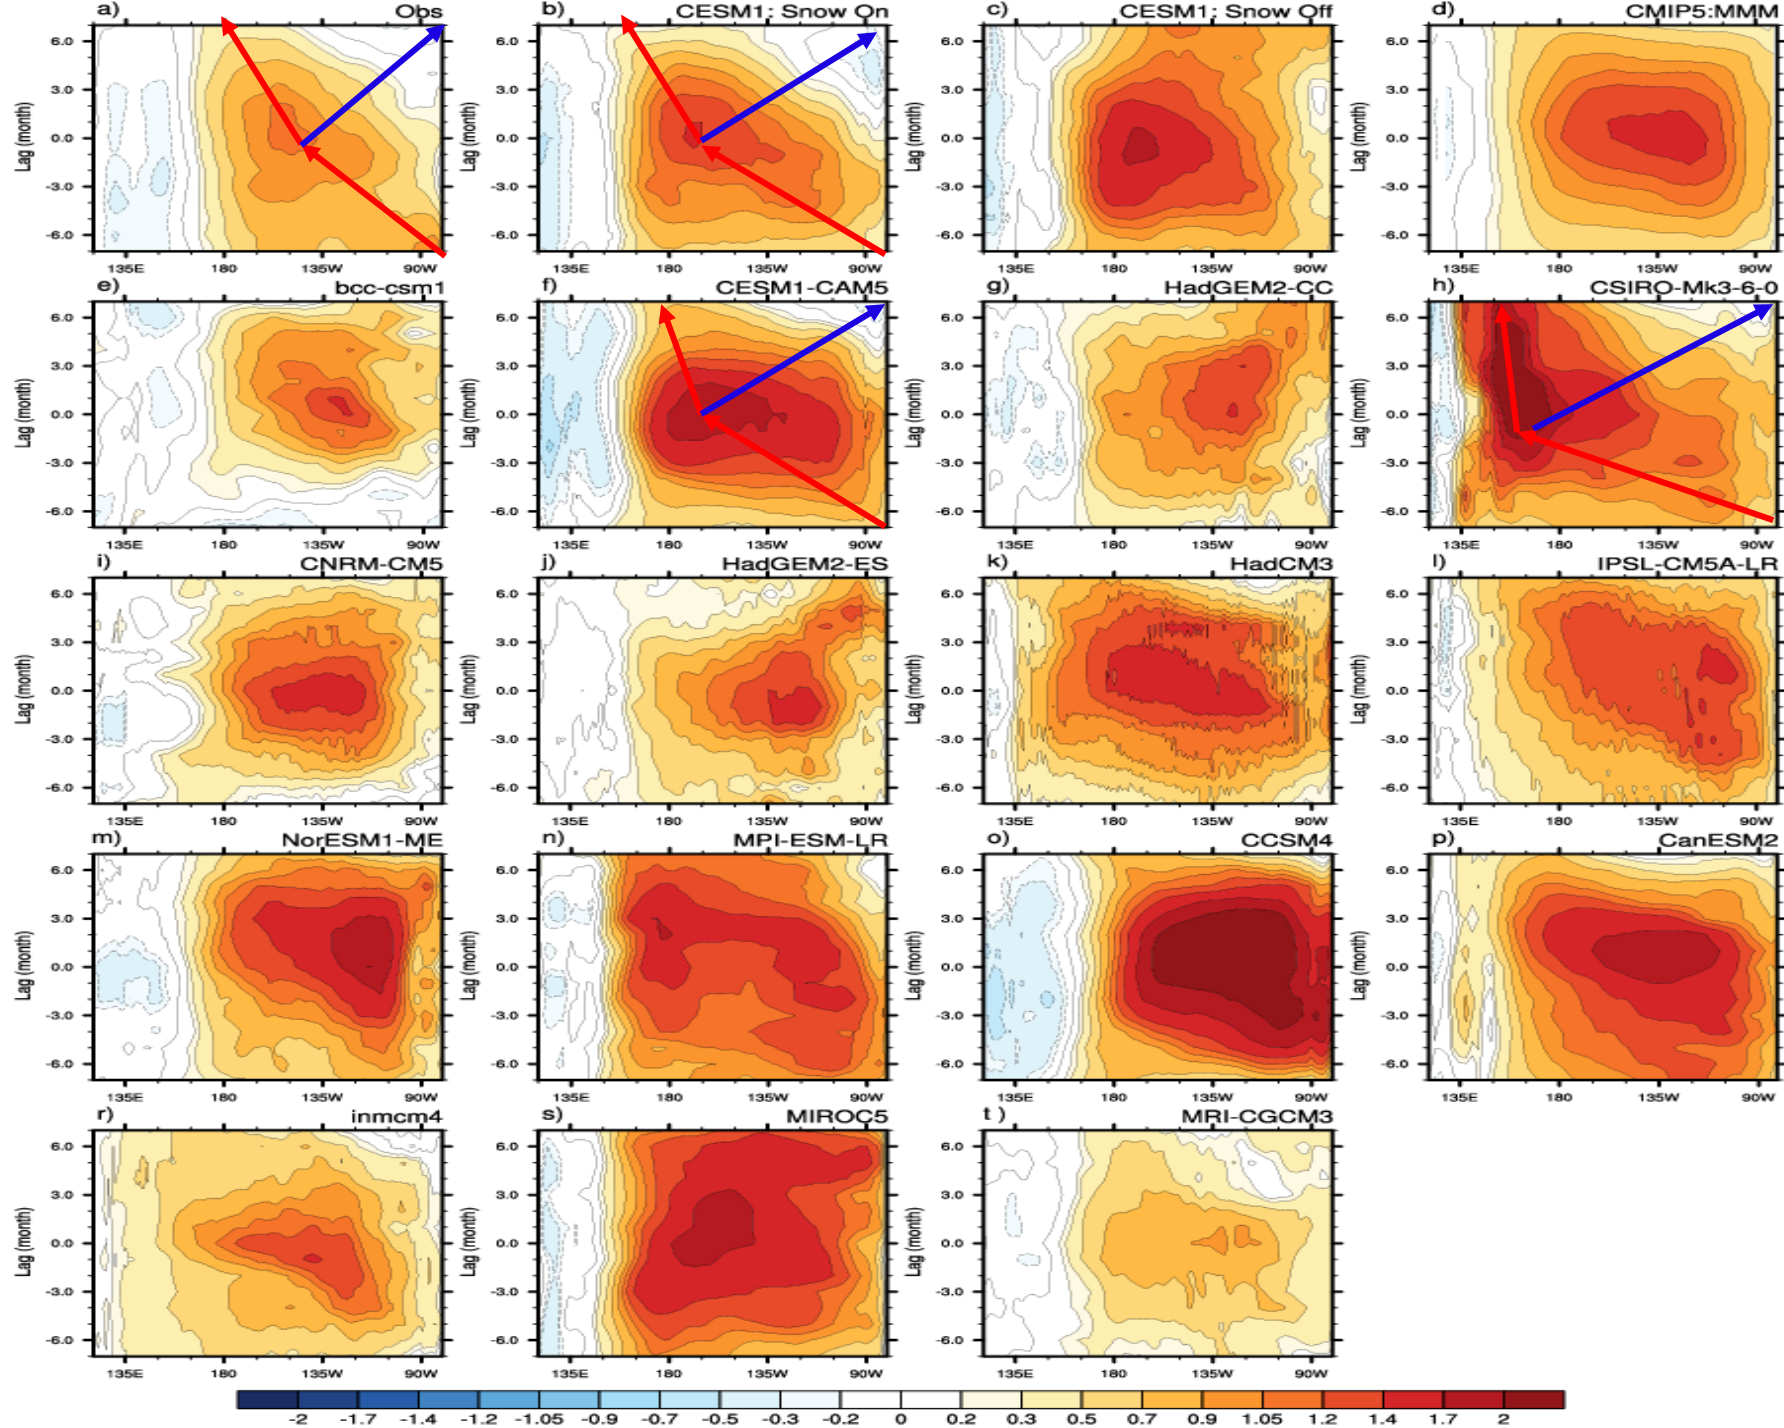

CMIP5 Seasonal SST Bias

Central Pacific ENSO Cycle (1900~2005) SST Anomaly Observations and Modeling

Summary and Conclusion

- **Current GCMs exclude snow-radiative effects**
- **Excluding snow-radiative effects leads to weakening surface wind stress and warming SSTs in seasonal variation and CP-El Nino**
- **Including snow-radiative effects largely reduces the model biases of CP-El Nino events**
- **Inclusion of the contribution of the snow and its radiative effects in models is important to improve the simulation of the Pacific mean state, seasonal cycle, and CP-El Niño**
